Comments

Comment by [Dustin Swayze](#) [03/Apr/24]

Hunt should generate access codes that are associated with that hunt. Access Code should be associated with a specific user on first access. (Does username exist?) Access Code acts as Player. Player can have user information, see which hunt is assigned (by linked access code), username and profile pic.

Probably best to have multiple users use the same access code for now and share that unique id for multiple people to play.

[KAN-55] Whenever a hunt ends, a notification needs to be sent to all players on the HUNT that its over, their completed/total, their rank relative to others. Created:

Description

Sprintable.

```
*Made changes so AccessCode. Code will only require the user's phone number for access code to hunt.  
// Original code from HuntController.cs line 237  
If (newUser.AccessCode!.Code == null) //If the admin didn't specify an access code (If we need to, I have  
the  
field readonly currently)  
{  
newUser.AccessCode = new AccessCode()  
{  
Hunt = hunt, //Setting foreign key  
Code = $"{newUser.PhoneNumber}/{hunt.HuntName!.Replace(" ", string.Empty)}", //This is the  
access code generation  
};  
}
```

```

newUser.AccessCode.Users.Add(newUser); //Setting foreign key.
}
// New Code change to line 237 of HuntController.cs
If (newUser.AccessCode!.Code == null) //If the admin didn't specify an access code (If we need to, I have
the
field readonly currently)
{
newUser.AccessCode = new AccessCode()
{
Hunt = hunt, //Setting foreign key
Code = $"{newUser.PhoneNumber!.Replace(" ", string.Empty))}", //This is the access code
generation
};
newUser.AccessCode.Users.Add(newUser); //Setting foreign key.
}
*Makes changes to cshtml code so when the Admin adds a player to the hunt it will only display the
player's
phone number for access code which is set as readonly at this time.
// Change code for the AddPlayerToHunt.cshtml line 34
// This is the original code in line 34
<div class="form-group">
<label asp-for="AccessCode!.Code" class="control-label"></label>
<input readonly placeholder="{PhoneNumber}/{HuntName}" asp-for="AccessCode!.Code"
class="form-
control" />
<span asp-validation-for="AccessCode!.Code" class="text-danger"></span>
</div>
// This is the new code after the change in line 34

Should be able to edit the attributes of the hunt directly from the hunt page, like start and end time, etc.

Comment by [Ethan Frazier](#) [15/Apr/24]

The rest might be out of scope for this sprint.

From what I've seen from looking at the some of the items in Services, multiple different Carriers can be accepted when making a user, but only Verizon can be successfully used due to line 285 in HunterController. Changing that should allow other Carriers to be messaged.

Description
<p>Two methods that show errors in hunt controller can be remove because they do not hinder functionality.</p> <p>SPRINTABLE</p>

Deleted Hunt Controller Method:

///TODO:this makes a to-do list

```
/// <summary>
/// www.localhost.com/hunt/details/{huntId} This is the details view of a hunt
/// </summary>
/// <param name="huntId"></param>
/// <returns></returns>
[Authorize(Roles = "Admin")]
public async Task<IActionResult> Details([Bind(Prefix = "Id")]int huntId)
{
    if (huntId == 0)
        return RedirectToAction("Index");

    var hunt = await _huntRepo.ReadAsync(huntId);
    if (hunt == null)
        return RedirectToAction("Index");

    return View(hunt);
}
```

AND

Hunt Controller Method:

```
/// <summary>
/// This is the get method for removing a task from a hunt. This is executed when clicking
"Remove" from the Hunt/ViewTasks screen
/// </summary>
/// <param name="id"></param>
/// <param name="huntid"></param>
/// <returns></returns>
/// TODO: Fix the View(task)
/// This is a comment. With an addition!
public async Task<IActionResult> RemoveTasks(int id, int huntid)
{
    var hunt = await _huntRepo.ReadAsync(huntid);
    ViewData["Hunt"] = hunt;
```

```

    var task = await _huntRepo.ReadLocation(id);
    return View(task);
}

```

Tested the code and it runs without issue.

Attachments:	 Hunter controller.pdf
Rank:	0 i0000d:
Sprint:	FINNA Sprint 1
Story point estimate:	1

Description
SPRINTABLE

The issue found in the hunt controller ended up being just a duplicate method that is replaced by the other class below it. The website retains functionality without having the method so I would recommend removing it in the next sprint or grooming it to be a simple task in the sprint since we do lack tasks.

Open image-20240330-230338.png

```
377     /// <summary>
378     /// This is the get method for removing a task from a hunt. This is executed when clicking "Remove" from the Hunt/ViewTasks screen
379     /// </summary>
380     /// <param name="id"></param>
381     /// <param name="huntId"></param>
382     /// <returns></returns>
383     /// TODO: Fix the View(task)
384     /// This is a comment. With an addition!
385     // TimothyG17 Arch +1*
386     public async Task<ActionResult> RemoveTasks(int id, int huntId)
387     {
388         var hunt = await _huntRepo.ReadAsync(huntId);
389         ViewData["Hunt"] = hunt;
390         var taskLocation = await _huntRepo.ReadLocation(id);
391         return View(task);
392     }
```

The same thing applies to the other error found in the hunt controller but it can also be implemented into a task next sprint. Since both do not affect functionality.

Open image-20240330-230517.png

```
142     public async Task<ActionResult> Details([Bind(Prefix = "Id")]int huntId)
143     {
144         if (huntId == 0)
145             return RedirectToAction("Index");
146
147         var hunt = await _huntRepo.ReadAsync(huntId);
148         if (hunt == null)
149             return RedirectToAction("Index");
150
151         return View(hunt);
152     }
```

not much to validate in this document. It is mostly just a stream of collective consciousness from the span of their sprint. They do provide useful information like atomic commits which allows for every little feature added to be its own commit to avoid merge conflicts.

For database documentation there are two documents. Server_Documentationupdated.txt is outdated, but useful if you wanted to set up a remote server instead of hosting it locally. "Database Documentation.docx" was validated. I will put both the sqlite documentation and the remote server documentation in the same file for the sake of ease of access. This file contains multiple suggestions for the database and changing it.

It was in the discord, but I'll copy and paste it here: "Overall it is correct and shares information that is helpful to understanding the program. However, it is missing some information or has slightly outdated information (like when it references lines that isn't exactly correct anymore), though what it is missing we will most likely be adding ourselves eventually, as we add more stuff to the project, so it shouldn't be an immediate issue."

There was some documentation above methods that weren't completely filled out (specifically documenting what is being returned). I believe they didn't fill everything out because it was either self explanatory, or it was pre-written code ASP.NET provided. Every return that I saw was returning a View(). The rest of the comments made sense.

It's there, it shouldn't be too hard to actually make it work, but currently only Verizon works due to hard-coding only Verizon to work by the previous group. That's seems like a separate task that I've put in the backlog.

I'll be marking this as complete for now.

Sprint:	FINNA Sprint 1
Story point estimate:	3

Description

SPRINTABLE

-Password Information Not Pulling Up

Requirements:

Optional/Functional -

The solution can show the information upon click.
The solution can remove a requirement when it is met.
The solution can allow users to check their passwords to see if they are correct.

Mandatory/Functional -

The solution must provide correct password information before login.
The solution is easy to see and interpret.

Changes- Added in unordered list since the error message is based off the errors focused in javascript. There can be event driven handling or input checking created in the future but this is a simple fix for now.

Test Cases:

Precondition: The registration page loads

Action: The password requirements show under the box

Postcondition: The page allows the user to register

Precondition: The registration page loads

Action: user inputs a wrong password and the error message appears at the top.

Postcondition: The page remains in unhindered by the misinput

ScavengeRUs.csproj

- I edited the above file to by changing the 6.0 to 8.0. (.NET Core)
- After running the program, it provided an error list that I would have had to follow.
 - Very tedious.....soooooo

[Updating my personal website from .NET 6 to .NET 8 LTS in 15 min](#)

- In VSCode, I downloaded an extension called 'C# Dev Kit'
- <https://dotnet.microsoft.com/en-us/platform/upgrade-assistant>
- PS cmd line
 - Dotnet tool install -g upgrade -assistant
 - Dotnet tool update -g upgrade-assistant
- PS cmd line inside the repo folder
 - upgrade-assistant upgrade . <--you can then choose the version.
